After about a year and a half working as a Technical Recruiter, I've decided to dive deep and go with my passion of programming. Currently, I'm finishing successfully the Elevation Academy Boot-Camp, and eager to find my first position in the industry!

In the end, we've made several E2E projects, using the following:

- **Client Side:** Angular 5\6.
- **Server Side:** Node.JS
- **DB:** MongoDB (Mongoose), MySQL (Sequelize)
- **Architecture:** Full MVC with OOP design.

My strong points are:

- Always aiming for using best practices.
- Writing maintainable, clean and readable code.
- **LOVE CODING**.

Please check my Github account to examine my projects
